Listing of Claims

1. - 41. Cancelled

42. (Previously Presented) A system for delivering and deploying a prosthesis, the system comprising:

the prosthesis, comprising a graft and an underlying stent, the graft having a connected end that is attached to the stent and an opposite end that is not attached to the stent;

a first member for releasably retaining at least a portion of the underlying stent in a compressed configuration, wherein at least a portion of the first member is positioned between the stent and the graft;

at least one second, releasable attachment member for releasably retaining at least the opposite end of the graft in a compressed configuration; and

a movable pusher member adapted to interface with the second member, the second member being releasable in response to movement of the movable pusher member.

43. (Original) The system of claim 42, wherein the first member comprises a sheath.

44. (Original) The system of claim 42, wherein the prosthesis is self-expanding.

45. (Cancelled).

46. (Currently Amended) The system of claim 42, wherein the second member retains the free-opposite end of the graft in contact with the first member.

47. (Original) The system of claim 42, wherein the second member comprises a suture.

48. (Previously Presented) The system of claim 47, wherein the suture comprises a slipknot adapted to be untied to release the free end of the graft.

49. (Original) The system of claim 47 further comprising a member adapted to cut the suture to release the free end of the graft.

50. (Previously Presented) The system of claim 42, wherein the second member comprises an adhesive.

51. (Previously Presented) The system of claim 42, wherein the second member comprises a crochet weave.

52. (Previously Presented) The system of claim 42, wherein the stent has a covered portion that is covered by the graft when the prosthesis is in an unexpanded configuration, and at least one uncovered portion that is not covered by the graft in an expanded configuration.

53. (Original) The system of claim 52, wherein the system further comprises a third member for releasably retaining the uncovered portion of the stent.

54. (Previously Presented) The system of claim 53, wherein the third member comprises a crochet weave.

55. (Previously Presented) The system of claim 42, wherein the second member comprises a removable wrapper adapted to be removed before delivery of the prosthesis into a body lumen.

56. (Canceled)

57. (Previously Presented) The system of claim 42, wherein the movable member comprises an inner core underlying the stent that is longitudinally slidable relative to the stent.

58. (Currently Amended) The system of claim ~~57~~42, wherein the second member comprises a portion of the graft that extends through a slot in the first member and a portion of the graft disposed within the slot and is retained between the inner core and by the first member in a first position of the inner core~~removable pusher member~~ relative to the first

member, but releasable in a second position of the ~~inner-core~~removable pusher member relative to the first member.

59. (Currently Amended) The system of claim ~~57~~42, wherein the second member comprises a suture and the ~~inner-core~~removable pusher member comprises a cutter positioned to cut the suture upon movement of the ~~inner-core~~removable pusher member a predetermined distance in a predetermined direction.

60. (Previously Presented) The system of claim 55, wherein the removable wrapper is a heat-set wrapper and the graft is heat set in the compressed configuration, the graft adapted to remain in the heat-set compressed configuration until the stent begins to expand and intraluminal fluid flows between the stent and the graft.

61-66. (Cancelled)
